

Recycling Services for

- Computers
- CRT/LCD Monitors
- Printers
- Servers
- Electronics
- Copiers
- Office Machines

Although there are tens of millions of computers out there, the useful life is normally less than three years and shrinking. So where do we stockpile this graveyard for dead technology?

The answer is that in most cases PCs and other electronics are merely chopped up, crushed and sent to a dump. The Environmental Protection Agency (EPA) has warned that end-of-life electronics pose serious issues regarding proper disposal and potential environmental consequences. The monitors' cathode ray tubes (CRTs) contain trace amounts of lead, phosphorous, cadmium and mercury. The glass screens also contain lead-bearing particles.

NLR is a permitted eWaste Specialist that can safely dispose of and recycle these devices, ensuring that a strict "No Landfill" policy is implemented.

Custom Containers & Labels:

- All containers labeled with EZ-read client information
- Large capacity containers
- Easily storable/stackable
- Bar coded for tracking

We eliminate from "Desktop to Dump"!

No Brokers. No Hassles. No Problems.
